Trip To kholapur-159

After like 2-3 years we were finally going for a family trip. We had planned a 4 days road trip kolhapur n finally balu mama.

We first went to shri Balu mama temple which is located at Adampur, Kolhapur. Balu mama was a saint who helped many people and this temple was built in his memory. The temple is around 1.5 km from Kolhapur by road. The temple had samadhi or tombstone of Balu mama. Along with that the temple also has a statutes of sheep and dog. The temple was very peaceful and you can experience an inner peace inside the temple. You experience spiritual enlightenment after visiting the temple.

After visiting the temple and it's surrounding at around 1 o'clock we went back to hotel to have our ~~l~~unch. After ~~l~~unch we went to visit shri Mahalaxmi temple at around 2 o'clock. It takes around 4 hours to reach the maha Laxmi temple from our hotel so we reached the temple at around 6 so since we reached the temple late in evening there was not much rush

The temple is among most famous and old temples in India. The temple has a very beautiful architect and is very peaceful. When we reached the temple it was very peaceful and pleasing. When you enter the temple you just get absorbed in the atmosphere of worship. You start feeling like seating in that peaceful atmosphere for hours away from the all rush and chaos of everyday life. The temple has 3 feet idol of goddess Laxmi.

After visiting the temple it was getting dark so we decided to move back to hotel to take some rest. Next day in the morning we went to rankala lake which is very famous for Boating and horse riding.

Road safety is something important that has to be followed at all times to ensure the safety of the operators of a vehicle, passengers, and pedestrians. In fact, road traffic injuries are the leading cause of death among people aged between 15 and 29 years. Traffic rules and guidelines have to be set in place and strictly followed so that serious accidents and injuries can be averted.

The measures and methods taken to establish road safety include the use of various road safety products. Well-designed and uniquely engineered road safety products ensure the constant safety of vehicles and pedestrians. These road safety products intimate people about parts of a road they should avoid and accident-prone zones as well as simply organize traffic and vehicles in an orderly manner.

Some important road safety products that are used worldwide are road barriers, road fences, and safety barricades.

Road Barriers

Road light barriers are mounted on the dividers that separate roads. They are positioned to increase the visibility of the dividers.

Some of the important features of road barriers are:

- Road barriers do not usually rust, chip or peel due to the high quality of their material. This also makes them maintenance free.
- Manufactured from premium grade UV stabilized virgin polyethylene material.
- The slots in the barriers are made to deflect the wind, preventing them from being uprooted.
- The road barriers have been designed to withstand high wind pressure generated by moving vehicles.
- Retroreflective strips are attached in the opposite direction of the traffic lights.
